

# 1255

---

1255 is a Copenhagen holding company that asks finance questions in Claude, answered from the books of both its companies.

---

## Setup

1255's operating company and holding company each keep their books in e-conomic. The people who own each login connected both through setup links.

---

## Answers

The team asks its finance questions in Claude, which reaches Gatlas through MCP, the open standard that lets agents connect to tools. It answers from datasets, each with what it means and notes on its columns.

The team's questions shaped the guidance an agent gets when a query goes wrong, and the profit and loss datasets. Every request an agent makes is logged.

---

## Facts

### Companies

A holding company and its operating company

---

### Ledgers

e-conomic, one set of books for each

---

### Connected

Through setup links, by the owner of each login

---

### Questions

Ledger detail, receivables, supplier balances and totals across both companies

---
